ALAMBDA SYSTEMS

Partner Capabilities

Talent Advisory and Project Delivery

Alambda brings AI architecture, engineering talent, and project delivery to your organization. Engage a senior AI architect, solutions architect, or CTO, add technical specialists, or scope a complete solution under a statement of work.

Core capabilities

AI and agentic architecture. AI systems, agentic engine patterns, reusable blueprints, multi-agent orchestration, and frontier model integration.

AI governance and security. Governance frameworks, agentic security, least privilege access architecture, guardrails, and evaluation.

AWS and Azure engineering. Cloud landing zones, identity and access, infrastructure automation, application modules, and end-to-end app development.

Geospatial and GeoAI. Spatial data integration, location intelligence, geospatial applications, and AI-powered mapping and analytics.

Speaking and technical evangelism. Public speaking, keynotes, executive briefings, workshops, demos, and developer education on AI, cloud, and GeoAI.

Engagement models and delivery scale

Offering	Engagement	Scale
Architecture and CTO leadership	Senior AI Architect, Solutions Architect, or CTO	Fractional advisory to full-time architecture leadership
Technical talent	Onshore AI engineers, developers, and architects	Engineering support through senior and lead specialists
Placement and referrals	Direct hire or contract-to-hire through our partner network	Individual placements or team hiring
Project delivery	Scoped statements of work for apps, AI architectures, and cloud landing zones	Individual modules to complete platforms
Speaking and evangelism	Keynotes, briefings, workshops, and technical demonstrations	Single sessions through ongoing programs

Corp-to-corp and W-2 arrangements are available. Engagement scope and partner terms are tailored to client needs.

Next step. Share the client need, timeline, and budget for a tailored proposal.
